

Prajwal Prashanth – Engineering Physics

prajwal028@outlook.com | [linkedin.com/in/prajwal-prashanth](https://www.linkedin.com/in/prajwal-prashanth) | prajwal.is-a.dev | github.com/Toricane

EDUCATION

Bachelor of Applied Science (BASc) in Engineering Physics

University of British Columbia

- Second-year student.

Sep 2026 – Apr 2030 (Expected)

Vancouver, BC

Engineering Transfer Program

Langara College

- GPA: 4.30/4.33; \$1,000 LSU Faculty of Science Award (highest GPA); \$7,500 President's International Entrance Scholarship.

Sep 2025 – Apr 2026

Vancouver, BC

TECHNICAL SKILLS

Languages: Python, C++, Java, TypeScript, JavaScript, SQL, HTML/CSS

Frameworks: React, Next.js, Flask, FastAPI

AI/ML & Data: scikit-learn, PyTorch, TensorFlow, Spark, Databricks, Delta Lake, OpenAI API, Gemini API

Databases & Cloud: PostgreSQL, MongoDB, ChromaDB, Supabase, Vercel

Developer Tools: Git & GitHub, Linux, Codex

EXPERIENCE

Co-founder & Full-Stack Developer | Next.js, TypeScript, Supabase, PostgreSQL, Vercel

Buildplate

Jun 2026 – Aug 2026

Greater Vancouver, BC (Remote)

- Built and launched a full-stack portfolio platform for hardware engineering recruitment, supporting 83 profiles and 66 published portfolios; implemented authentication, project editing, media uploads, and a searchable talent directory.
- Redesigned onboarding with searchable school/program fields and resumable profile setup, allowing users to save after entering their name and profile URL while retaining validation requirements for publishing.

Community DevOps Manager; Independent Contractor | Gumloop, GitHub Pages, Discord

BC + AI Ecosystem Association

Feb 2026 – May 2026

Greater Vancouver, BC (Remote)

- Reconfigured Discord permissions and onboarding for a 1,000+ member community; established GitHub contribution workflows and built and deployed a community project directory with submission templates.
- Implemented a Gumloop news pipeline with a five-day recency filter, SHA-256 deduplication, and scheduled delivery to Discord via webhooks.

PROJECTS

cell-safe: Emergency Response Planning | Python, SQL, Spark, Databricks, Delta Lake

Data Intelligence for Smarter Communities Hackathon; Rogers, UBC & Databricks

Sep 2026

Vancouver, BC

- Won 1st place and \$3,000 for an emergency-response prototype supporting transport, shelter, and resource planning using cell tower data.
- Designed the medallion pipeline and database schema, transforming 8.06 million synthetic cellular records into 437,760 minute-level rows of active-session counts; grouped 36 home origins into four geographic buckets.
- Helped develop the response scenario: use home-origin data to explore travel disruptions and shelter needs when disasters or extreme weather prevent people from getting home safely.

Vancouver AI Data Storytelling Hackathon | Python, OpenAI API, scikit-learn, Plotly, Flask

BC + AI Ecosystem Association; Rival Technologies

May 2025 – Oct 2025

Vancouver, BC

- Earned the \$1,000 “Hall of Fame” prize and placed second overall in a four-round data storytelling competition.
- Built interactive 3D survey dashboards using text embeddings, t-SNE, and silhouette-selected K-Means clusters to explore Canadian identity and BC residents’ AI perspectives across surveys of 1,000+ respondents each.
- Extended the dashboards with AI-generated roundtable dialogues, distinct synthesized voices, and synchronized transcript playback to communicate contrasting survey themes.
- Developed PlatoAI, a Flask application combining semantic retrieval and conversational context to generate Socratic dialogues grounded in 1,000+ music-survey responses, with clickable source citations.

JARVIS for the Visually Impaired | Python, C++, Edge Impulse

The Knowledge Society (TKS)

Jan 2024 – Dec 2024

Vancouver, BC

- Developed a wearable AI voice assistant providing spoken environment descriptions and web-based Q&A, with speech beginning in under two seconds; ported wake-word detection and speech-to-text to a Saeed Studio XIAO ESP32S3 Sense using C++ and Edge Impulse.
- Secured a \$1,000 Regional Award grant from Ingenious+ to fund continued development; presented at four Vancouver AI Community Meetups, gathering iterative feedback from local AI professionals.

Google Internal Announcements MVP | Gemini API, RAG

The Knowledge Society (TKS)

Dec 2023, Aug 2024

Vancouver, BC

- Built a Gemini-powered MVP for a TKS challenge addressing Google’s internal announcements, combining role- and region-specific product updates with a RAG chat interface for document-grounded Q&A.
- Ranked by Google Canada as the top solution out of 100+ submissions; presented the MVP to a panel including the Global Head of Partnerships.
